

Name of Academy	Bourne End Academy
------------------------	--------------------

Introduction

The government continues to manage the risk of serious illness from the spread of the virus. Step 4 marked a new phase in the government's response to the pandemic, moving away from stringent restrictions on everyone's day-to-day lives, towards advising people on how to protect themselves and others, alongside targeted interventions to reduce risk. As COVID-19 becomes a virus that we learn to live with, there is now an imperative to reduce the disruption to children and young people's education - particularly given that the direct clinical risks to children are extremely low, and every adult has been offered a first vaccine and the opportunity for two doses by mid-September

The priority is for schools to deliver face-to-face high-quality education to all pupils. The evidence is clear that being out of education causes significant harm to educational attainment, life chances, mental and physical health.

This risk assessment is based on government guidance prepared in accordance with the Department of Health and Social Care (DHSC) and Public Health England (PHE).

<https://www.gov.uk/government/publications/actions-for-schools-during-the-coronavirus-outbreak/schools-covid-19-operational-guidance>

We must comply with health and safety law and put in place proportionate control measures. We must regularly review and update our risk assessments - treating them as 'living documents', as the circumstances in schools and the public health advice changes. This includes having active arrangements in place to monitor whether the controls are effective and working as planned.

School employers and leaders are required by law to think about the risks the staff and pupils face and do everything reasonably practicable to minimise them, recognising they cannot completely eliminate the risk of coronavirus (COVID-19). School employers must therefore make sure that a risk assessment has been undertaken to identify the measures needed to reduce the risks from coronavirus (COVID-19) so far as is reasonably practicable and make the school compliant with guidance. General information on how to make a workplace compliant, including how to approach a coronavirus (COVID-19) risk assessment, is provided by the [HSE guidance on working safely](#).

This risk assessment checklist/tool is based on Government guidelines on COVID-19 as at 17th August 2021 and is provided to help schools to prepare and decide arrangements for an increased number of children attending/returning to school. Sensible and proportionate control measures which follow the health and safety hierarchy of controls to reduce the risk to the lowest reasonable practicable level.

Risk assessment is about identifying sensible measures to control the risks in a workplace or when undertaking an activity. The process evaluates the threats and risks of a specified issue/situation and enables the likelihood that somebody could be harmed, together with an indication of how serious the harm could be, to be considered.

The Risk Assessment below details specific measures but as an overarching summary:-

Core Principles

Mixing and “bubbles”

We no longer recommend that it is necessary to keep children in consistent groups ('bubbles').

This means that bubbles will not need to be used for any summer provision (for example, summer schools) or in schools from the autumn term.

As well as enabling flexibility in curriculum delivery, this means that assemblies can resume, and you no longer need to make alternative arrangements to avoid mixing at lunch.

You should make sure your contingency plans/outbreak management plans cover the possibility that in some local areas it may become necessary to reintroduce 'bubbles' for a temporary period, to reduce mixing between groups. Any decision to recommend the reintroduction of 'bubbles' would not be taken lightly and would need to take account of the detrimental impact they can have on the delivery of education.

Tracing Close Contacts and Isolation

Settings will only need to do contact tracing up to and including the 18th July.

Close contacts will now be identified via NHS Test and Trace and education settings will no longer be expected to undertake contact tracing. As with positive cases in any other setting, NHS Test and Trace will work with the positive case and/or their parent to identify close contacts. Contacts from a school setting will only be traced by NHS Test and Trace where the positive case and/or their parents specifically identifies the individual as being a close contact. This is likely to be a small number of individuals who would be most at risk of contracting COVID-19 due to the nature of the close contact. You may be contacted in exceptional cases to help with identifying close contacts, as currently happens in managing other infectious diseases.

Individuals are not required to self-isolate if they live in the same household as someone with Covid-19, or are a close contact of someone with Covid-19 and any of the following apply:

- they are fully vaccinated

- they are below the age of 18 years and 6 months
- they have taken part in or are currently part of an approved COVID-19 vaccine trial
- they are not able to get vaccinated for medical reasons

Instead they will be contacted by NHS Test and Trace, informed they have been in close contact with a positive case and advised to take a PCR test. We would encourage all individuals to take a PCR test if advised to do so.

Staff who do not need to isolate, and children and young people aged under 18 years and 6 months who usually attend school, and have been identified as a close contact, should continue to attend schools as normal. They do not need to wear a face covering within the school, but it is expected and recommended that these are worn when travelling on public or dedicated transport.

18-year-olds will be treated in the same way as children until 6 months after their 18th birthday, to allow them the opportunity to get fully vaccinated. At which point, they will be subject to the same rules as adults and so if they choose not to get vaccinated, they will need to self-isolate if identified as a close contact.

Settings will continue to have a role in working with health protection teams in the case of a local outbreak. If there is a substantial increase in the number of positive cases in a setting or if central government offers the area an enhanced response package, a director of public health might advise a setting to temporarily reintroduce some control measures.

Face Coverings

Face coverings are no longer advised for pupils, staff and visitors either in classrooms or in communal areas

The government has removed the requirement to wear face coverings in law but expects and recommends that they are worn in enclosed and crowded spaces where you may come in to contact with people you don't normally meet. This includes public transport and dedicated transport to school or college.

E-ACT continues to support staff and students who may choose to continue to wear a face covering

In circumstances where face coverings are recommended

If you have a substantial increase in the number of positive cases, a director of public health might advise you that face coverings should temporarily be worn in communal areas or classrooms (by pupils, staff and visitors, unless exempt).

You should make sure your outbreak management plans cover this possibility. In these circumstances, transparent face coverings, which may assist communication with someone who relies on lip reading, clear sound or facial expression to communicate, can also be worn. Transparent face coverings may be effective in reducing the spread of COVID-19. However, the evidence to support this is currently very limited. Face

coverings (whether transparent or cloth) should fit securely around the face to cover the nose and mouth and be made with a breathable material capable of filtering airborne particles. The main benefit from a transparent face covering is that they can aid communication, for example enabling lip-reading or allowing for the full visibility of facial expressions, but this should be considered alongside the comfort and breathability of a face covering that contains plastic, which may mean that the face covering is less breathable than layers of cloth.

Face visors or shields can be worn by those exempt from wearing a face covering but they are not an equivalent alternative in terms of source control of virus transmission. They may protect the wearer against droplet spread in specific circumstances but are unlikely to be effective in preventing the escape of smaller respiratory particles when used without an additional face covering. They should only be used after carrying out a risk assessment for the specific situation and should always be cleaned appropriately. The use of face coverings may have a particular impact on those who rely on visual signals for communication. Those who communicate with or provide support to those who do, are exempt from any recommendation to wear face coverings in education and childcare settings. You have a duty to make reasonable adjustments for disabled pupils to support them to access education successfully.

Where appropriate, you should discuss with pupils and parents the types of reasonable adjustments that are being considered to support an individual. No pupil or student should be denied education on the grounds of whether they are, or are not, wearing a face covering.

Stepping Measures Up and Down

You should have contingency plans (sometimes called outbreak management plans), outlining what you would do if children, pupils, students or staff test positive for COVID-19, or how you operate if you were advised to take extra measures to help break chains of transmission. Given the detrimental impact that restrictions on education can have on children and young people, any measures in schools should only ever be considered as a last resort, kept to the minimum number of schools or groups possible, and for the shortest amount of time possible.

Central government may offer local areas of particular concern an enhanced response package to help limit increases in transmission.

For most settings it will make sense to think about taking extra action if the number of positive cases substantially increases. Information on what circumstances might lead you to consider taking additional action, and the steps you should work through, can be found in the [contingency framework](#).

The contingency framework describes the principles of managing local outbreaks of COVID-19 in education and childcare settings. Local authorities, directors of public health (DsPH) and PHE health protection teams (HPTs) can recommend measures described in the contingency framework in individual education and childcare settings – or a small cluster of settings – as part of their outbreak management responsibilities.

Systems of Controls

1. Ensure good hygiene for everyone

- a. Frequent and thorough hand cleaning should now be regular practice. You should continue to ensure that pupils and staff clean their hands regularly. This can be done with soap and water or hand sanitiser.
- b. The “catch it, bin it, kill it” approach continues to be very important.
- c. Most staff in schools will not require PPE beyond what they would normally need for their work.

2. Maintain appropriate cleaning regime, using standard products such as detergents

- a. You should put in place and maintain an appropriate cleaning schedule. This should include regular cleaning of areas and equipment (for example, twice a day) with a particular focus on frequently touched surfaces.

3. Keep occupied spaces well ventilated

- a. When your school is in operation, it is important to ensure it is well ventilated and that a comfortable teaching environment is maintained.
- b. You should identify any poorly ventilated spaces as part of your risk assessment and take steps to improve fresh air flow in these areas, giving particular consideration when holding events where visitors such as parents are on site, for example school plays.
- c. Mechanical ventilation is a system that uses a fan to draw fresh air, or extract air from a room. These should be adjusted to increase the ventilation rate wherever possible and checked to confirm that normal operation meets current guidance and that only fresh outside air is circulated. If possible, systems should be adjusted to full fresh air or, if this is not possible, then systems should be operated as normal as long as they are within a single room and supplemented by an outdoor air supply. Where mechanical ventilation systems exist, you should ensure that they are maintained in accordance with the manufacturers’ recommendations.
- d. Opening external windows can improve natural ventilation, and in addition, opening internal doors can also assist with creating a throughput of air. If necessary, external opening doors may also be used (if they are not fire doors and where safe to do so). You should balance the need for increased ventilation while maintaining a comfortable temperature.
- e. The DFE is working with Public Health England, NHS Test and Trace, and the Scientific Advisory Group for Emergencies (SAGE) on a pilot project to measure CO2 levels in classrooms and exploring options to help improve ventilation in settings where needed.

4. Following Public Health advice on testing, self-isolation and managing confirmed cases of COVID-19

When an individual develops COVID-19 symptoms or has a positive test. Pupils, staff and other adults should follow public health advice on [when to self-isolate and what to do](#). They should not come into school if they have symptoms, have had a positive test result or other reasons requiring them to stay at home due to the risk of them passing on COVID-19 (for example, they are required to quarantine). If anyone in your school develops [COVID-19 symptoms](#), however mild, you should send them home and they should follow public health advice.

For everyone with symptoms, they should avoid using public transport and, wherever possible, be collected by a member of their family or household.

If a pupil is awaiting collection, they should be left in a room on **their own if possible** and safe to do so. A window should be opened for fresh air ventilation if possible. Appropriate PPE should also be used if close contact is necessary. Further information on this can be found in the [use of PPE in education, childcare and children's social care settings](#) guidance. Any rooms they use should be cleaned after they have left.

The household (including any siblings) should follow the PHE [stay at home guidance for households with possible or confirmed coronavirus \(COVID-19\) infection](#).

Asymptomatic testing

Testing remains important in reducing the risk of transmission of infection within schools. That is why, whilst some measures are relaxed, others will remain, and if necessary, in response to the latest epidemiological data, we all need to be prepared to step measures up or down in future depending on local circumstances.

Over the summer, staff and secondary pupils should continue to test regularly if they are attending settings that remain open, such as summer schools and out of school activities based in school settings. Schools will only provide tests for twice weekly asymptomatic testing for pupils and staff over the summer period if they are attending school settings. However, testing will still be widely available over the summer and kits can be collected either from your local pharmacy or ordered online.

As pupils will potentially mix with lots of other people during the summer holidays, all secondary school pupils should receive 2 on-site lateral flow device tests, 3 to 5 days apart, on their return in the autumn term.

Settings may commence testing from 3 working days before the start of term and can stagger return of pupils across the first week to manage this. Pupils should then continue to test twice weekly at home until the end of September, when this will be reviewed.

Staff should undertake twice weekly home tests whenever they are on site until the end of September, when this will also be reviewed.

Secondary schools should also retain a small asymptomatic testing site (ATS) on-site until further notice so they can offer testing to pupils who are unable to test themselves at home.

There is no need for primary age pupils (those in year 6 and below) to test over the summer period. They will be offered the 2 tests at an ATS at the beginning of the autumn term when they start at their secondary school as a new year 7. Schools may choose, however, to start testing year 6 pupils earlier, including in summer schools, depending on their local circumstances.

Confirmatory PCR tests

Staff and pupils with a positive LFD test result should self-isolate in line with the [stay at home guidance for households with possible or confirmed coronavirus \(COVID-19\) infection](#). They will also need to [get a free PCR test to check if they have COVID-19](#).

Whilst awaiting the PCR result, the individual should continue to self-isolate.

If the PCR test is taken within 2 days of the positive lateral flow test, and is negative, it overrides the self-test LFD test and the pupil can return to school, as long as the individual doesn't have COVID-19 symptoms.

Additional information on [PCR test kits for schools and further education providers](#) is available.
